Critical Illness Affects Many Americans.

Approximately **1.5 MILLION**
Americans suffer heart attacks and strokes each year.¹

The Timber Ridge Series® Plan

Critical illness insurance can help people facing the financial challenges associated with surviving a critical illness. With Timber Ridge Series, critical illness benefits are built into a term life insurance policy, designed to pay death benefits if you die and living benefits if you are diagnosed with a covered critical condition when you need those benefits the most.

Death from any cause is a 100% benefit

Except suicide during the first two years (first year for Colorado, Missouri, and North Dakota).

Covered Conditions²

Invasive Cancer	100%
Heart Attack	100%
Stroke	100%
End-Stage Renal Failure	100%
Major Organ Transplant	100%
Terminal Illness	100%
Advanced Alzheimer's Disease	100%
Loss of Independent Living	100%
Loss of Limbs	100%
Major Burns	100%
Paralysis	100%
Coronary Bypass Surgery	25%
Heart Valve Replacement/Repair Surgery	25%
Aortic Surgery	25%
Angioplasty	10%

Isn't a Check Better than a Get Well Card?

Living benefits are paid directly to you, and you choose how to spend the benefit. For example:

- Home Healthcare
- Cost of Caregivers
- Lost Income of Self or Spouse
- Daily Living Expenses
- Co-Pays and Deductibles
- Non-Covered "Experimental" Treatments
- Housekeeping or Childcare Expenses
- Maintenance of Your Family's Quality of Life

² Covered conditions are defined in the policy. The summary contained in this piece is only an overview of the actual policy definitions, which should be consulted and will control.

Critical Illness Family Rider (Optional)³

Spouse Only option – Under this option, with the payment of the required premium and approval by the home office, this rider provides \$10,000 of 10-year level term life insurance in the event of death and/or critical illness coverage upon first diagnosis of life threatening cancer, heart attack, stroke, renal failure, major organ transplant and terminal illness.² The rider is guaranteed renewable every 10 years and terminates at your age 70 or your spouse's age 70, whichever occurs first. It is convertible to a \$10,000 renewable and convertible term life policy with the critical condition accelerated benefit rider without proof of insurability based on the premium rates at his/her then attained age.

Spouse and/or Child option – Under this option, child coverage is also available. All eligible children can be covered for \$5,000 of 10-year level term life insurance and critical illness coverage for the same covered conditions as the spouse. Refer to the policy for spouse and child eligibility definitions.

Under either option, the total amount paid out for death benefits or covered conditions will not exceed \$10,000 on the insured spouse and \$5,000 per insured child. Benefits may vary by state.

Tax Treatment of Accelerated Living Benefit

Unlike a death benefit, living benefits may be taxable. You should consult with a tax advisor as to the taxability of any living benefit you receive.

Coverage Reduction and Termination

Termination of the life insurance policy will terminate living benefits. This plan ends when you reach age 70. See the policy for options available to convert the life insurance coverage prior to age 65.

How do Death and Living Benefit Coverages Work?⁴

The Timber Ridge Series pays:

- **Death benefits** following your death while the policy remains in force. The death benefit available reduces by the amount of any living benefit payments made.
- **Living benefits** following the first-ever diagnosis of one of the covered conditions (listed above) made on or after the 30th day after the policy effective date, regardless of additional treatment, actual expenses or other coverage.² If 100% of the face amount is paid as a living benefit, the policy and coverage ends. Only one living benefit payout per policy for each type of benefit.⁵

Every ten years, the amount of premium will increase or you may elect to continue to pay the same premium and the coverage will decrease.

³ The Critical Illness Family Rider automatically renews in most states when the policy is renewed.

⁴ Some exclusions and exceptions apply. Benefits may differ or not be available in some states. Your agent will explain the benefits available in your state.

⁵ For all covered conditions with the same percentage of face amount: 1) the face amount of the Policy will be reduced by the amount of benefit paid under the Rider; and 2) the premium for the Policy will be reduced to reflect that reduction.

COVERED CONDITIONS AND DEFINITION SUMMARY²

Advanced Alzheimer's Disease – The diagnosis, by a legally qualified physician (LQP) board-certified as a neurologist, that the primary insured (PI) has advanced Alzheimer's Disease. The PI must exhibit loss of intellectual capacity involving impairment of memory and judgement as measured by clinical evidence and standardized testing. It must result in significant reduction in mental and social functioning such that the PI requires substantial assistance in performing at least three of the six Activities of Daily Living (ADL) — transfer and mobility, continence, dressing, toileting, eating and bathing. No other dementing organic brain disorders or psychiatric illnesses shall meet the definition of Advanced Alzheimer's Disease, nor will they be considered a covered condition.

Angioplasty – The PI's actual undergoing of a percutaneous transluminal angioplasty deemed medically necessary to correct a narrowing or blockage of one or more coronary arteries. An LQP board-certified as a cardiologist must perform the procedure. Other surgical or non-surgical techniques such as laser relief or any other intra-arterial procedures do not qualify under this covered condition.

Aortic Surgery – The PI's actual undergoing of surgery for disease of the aorta needing excision and surgical replacement of a portion of the diseased aorta with a graft. The surgery must be deemed medically necessary and performed by an LQP board-certified as a cardiologist, cardio-vascular thoracic surgeon or vascular surgeon. For this definition, aorta means the thoracic and abdominal aorta but not its branches. Traumatic injury of the aorta causing aortic surgery does not qualify under this covered condition.

Coronary Bypass Surgery – The PI's actual undergoing of coronary artery bypass surgery using either a saphenous vein or internal mammary artery graft for the treatment of coronary heart disease deemed medically necessary to correct a narrowing or blockage of one or more coronary arteries. The procedure must be performed by an LQP board-certified as a cardiologist. Other surgical or non-surgical techniques such as laser relief or any other intra-arterial procedures do not qualify under this covered condition.

End-Stage Renal Failure – The chronic and irreversible failure of both of the PI's kidneys which requires him or her to undergo periodic and ongoing dialysis. The diagnosis must be made by an LQP board-certified in nephrology.

Heart Attack – An acute myocardial infarction resulting in the death of a portion of the PI's heart muscle (myocardium) due to a blockage of one or more coronary arteries and resulting in the loss of the normal function of the heart. The diagnosis must be made by an LQP board-certified as a cardiologist and based on both: 1) new clinical presentation and electrocardiographic changes consistent with an evolving heart attack; and 2) serial measurement of cardiac biomarkers showing a pattern and to a level consistent with a diagnosis of heart attack. An established (old) myocardial infarction does not qualify under this covered condition.

Heart Valve Replacement/Repair Surgery – The PI's actual undergoing of open heart surgery to replace or repair one or more valves. The surgery must be deemed medically necessary and performed by an LQP board-certified as a cardiologist or cardio-vascular surgeon.

Invasive Cancer – A malignant neoplasm experienced by the PI, which is characterized by the uncontrolled growth and spread of malignant cells and the invasion of tissue, and which is not specifically otherwise excluded. Leukemias and lymphomas are included. The following are not considered invasive cancer: 1) Pre-malignant lesions (such as intraepithelial neoplasia); or 2) benign tumors or polyps; or 3) early prostate cancer diagnosed as T1N0M0 or equivalent staging; or 4) cancer in situ; or 5) any skin cancer (other than invasive malignant melanoma in the dermis or deeper or skin malignancies that have become metastatic); or 6) any cancer that is non-life threatening. Invasive cancer must be diagnosed pursuant to a pathological diagnosis or clinical diagnosis.

Loss of Independent Living – The diagnosis, by an LQP board-certified in a specialty which is medically appropriate for the related condition, that the PI has been unable for at least 180 consecutive days to perform by him or herself, without substantial assistance from another person, at least three of the six ADLs. This inability must be expected to be permanent.

Loss of Limbs – The diagnosis, by an LQP board-certified as medically appropriate for this condition, of a total and irreversible severance of two or more of the PI's limbs from above the wrist or ankle joint as the result of an accident or medically required amputation.

Major Burns – The diagnosis, by an LQP board-certified as a plastic surgeon, that the PI has sustained third degree burns covering at least 20% of the surface area of the PI's body.

Major Organ Transplant – The clinical evidence of the PI's major organ(s) failure which requires the malfunctioning organ(s) or tissue of the PI to be replaced with an organ(s) or tissue from a suitable human donor (excluding the PI) under generally accepted medical procedures. The organs and tissues covered by this definition are limited to: liver, kidney, lung, entire heart, small intestine, pancreas, pancreas-kidney or bone marrow. Also, the PI must be registered by the United Network of Organ Sharing (UNOS) in order for the major organ transplant to be a covered condition under this Rider.

Paralysis – The PI's complete and permanent loss of use of two or more limbs through neurological injury for a continuous period of at least 180 days, confirmed by an LQP board-certified as a neurologist.

Stroke – Any acute cerebrovascular accident experienced by the PI, producing neurological impairment and resulting in paralysis or other measurable objective neurological deficit persisting for at least 96 hours and expected to be permanent. Transient ischemic attack (mini-stroke), head injury, chronic cerebrovascular insufficiency and reversible ischemic neurological deficits are excluded. The diagnosis must be made by an LQP board-certified as a neurologist.

Terminal Illness – Advanced or rapidly progressing incurable disabling terminal illness where, based on our investigation, the PI's life expectancy is no greater than 12 months.

Why Critical Illness Coverage?

Many Americans are surviving critical illnesses that would have been fatal in the past, thanks to advances in medical technology. Almost everyone knows someone who has experienced a critical illness of some kind, and survived physically. Critical illness insurance is designed to help people through the financial challenges associated with surviving a critical illness.

Survival Rates Are Up

- From 1999 to 2009, the death rate declined by 33% from heart attacks and by 23% from stroke.⁶
- More than 7 million Americans today have survived a stroke. It is a leading cause of U.S. adult disability.⁷
- The possibility of surviving a critical illness before age 65 is almost twice as great as dying.⁸
